

Product focus

Are you sitting comfortably?

Seating blends functionality and aesthetics – it defines a space with a clear purpose and gives a personality to a room. *CFI* explores a selection of seating options and the range of materials, shapes and colours that make these pieces of furniture a key element onboard passenger ships

1. Amanu by Tribù

The Amanu collection combines comfort and sustainability to bring the quality of interior seating to outdoor furniture. The Amanu lounge chair's woven, hemp-based Canax slink seats seem to float from a slimline-teak frame, which is sourced from sustainably managed Indonesian plantations. The slightly tapered legs provide lightness and grace, while the smooth, half-rounded armrests and the elegantly finished cushions make the chair comfortable.

2. Cabanas by ROBOS

ROBOS cabanas are designed to bring the comfort of indoors outside, with an added architectural style. The cabanas provide the comfort and elegance of the furniture found in a five-star resort. Each cabana can be fully customised to the client's vision by changing elements such as fabrics, materials, dimensions and finishes.

3. Good collection by Braidà

Braidà believes true comfort goes beyond physical support – it embraces the emotions and values of those who use the products. The Good collection, designed by Simone Micheli, is modular, sustainable and made to adapt over time. There are dozens of possible variants for each seating model, all of which can then be further customised by using different combinations of coatings, wood and metal finishes.

5. Sunbrella Horizon vinyl by Dickson

Sunbrella Horizon vinyl can be used for marine upholstery applications, including on captain's chairs, cushions, bench seating and sun pads. This textile is available in Capriccio leather effect (in 22 colours) and Sorrento textile effect (in 10 colours). It can be stretched considerably in four directions thanks to its knitted design, which prevents it from losing its style, shape or elasticity. The range is guaranteed for five years against the loss of strength and fading in normal usage and exposure conditions. The range also comes with a three-year warranty against pink bacterial staining and mould. It is International Maritime Organization Marine Equipment Directive certified, guaranteeing its compliance with marine safety standards for indoor and outdoor use.

4. Linar chair by FZ Collection

This modern fully upholstered chair is a sculptural embodiment of quiet sophistication and tailored elegance. Its silhouette draws inspiration from mid-century design, reinterpreted with contemporary minimalism and precision detailing. The defining feature is its sloped-angle side arms which are seamlessly integrated into the frame to create a fluid profile that invites relaxation without sacrificing structure. The chair takes cues from 1950s Scandinavian and American modernist lounges, distilling their warmth, functionality and form into a refined piece that fits effortlessly into curated interiors. The subtle flares and tapers suggest motion and elegance, while the compact scale and tight construction reflect modern sensibilities well suited for the marine environment.

6. Sundance KoolFab by Morbern

The Sundance range now offers enhanced outdoor seating performance with built-in KoolFab technology. Traditionally designed in lighter colours to avoid overheating, outdoor upholstery fabrics can now be made in modern, darker and brighter hues due to KoolFab infrared reflective technology. By reflecting the sun's rays instead of absorbing them, KoolFab keeps surfaces cool, offering comfort without sacrificing style or sustainability thanks to a 100 per cent recycled polyester backing.
